

# **The Future of Women in Cybersecurity**

Lisa Kearney

Women CyberSecurity Society

As cyber attacks increase, governments and businesses are losing trillions of dollars annual due to stolen intellectual property and time and money spent responding to cyber incidents. The future of the industry depends on diverse mindsets to foster innovation and drive advances for robust cyber defences, skillsets, and resources.

Women have an important role in research, development and in the workforce to ensure diversity is considered when it comes to algorithms, machine learning, data analytics which will impact society for years to come.
